If yes, then this article is for you! Now: why do Android phones have secret codes? When manufacturers process their electronic products, each product must pass through a quality control, in which devices are tested and analyzed. This is done to ensure that the products pass the quality standard set by customers, companies or manufacturers. But this is not everything. When it comes to Android devices, especially smartphones and tablets, they suffer various performance tests to make sure the product works and has no problems. The downside is ... we will consume that the temporal expense and the sources are limited if they have not had any special means of testing. Therefore, I Å ç à, ~ Å ~droid Secret Codes" There are for this sole purpose. With these or hidden men, you can make your Android phone run certain tasks. Also, you also use these codes to verify various information on the device. Looks pretty good right? So if you are here for those reasons, then you're in luck. We have listed a lot of Dialer codes and any secret codes Android, common codes, common codes, hidden menus and participates © Samsung secret codes and secret codes for the HTC Android diagnostics. Must Read: How You wipe your phone completely incredible 29 Hack Android There probably never have heard, however, you have to keep in mind that some of these codes are universal and some are not. Making some of the unnecessary codes for a cell while some are exclusive to specific manufacturers. In addition, it is best to remind yourself that some of these codes and can delete the entire smartphone and reset. Yikes! Be cautious and read the description. So, without further ADO, we jump straight into some great Android secret codes, hidden menu and dialer codes. What are the USSD codes and MMI? USSD codes are Android and MMI codes that begin with a pound or hashtag. These symbols are updated, and as when Android releases a new version. In addition, some smartphone manufacturers have their USSD codes and MMI. Typically, USSD (Unstructured Supplementary Service Data) codes are used to communicate with a smartphone and a mobile network operator. This means, for USSD codes to work, it is always necessary to stay in touch with your operator. MMI (Man Machine Interface) codes, on the other hand, allow you to access interesting information on smartphones, such as the IMEI number, hidden menu, repair services, and more. Common Codes Android Here are all common Android Dialer codes that anyone with a phone or Android tablet could use. You can find the downloadable files of common codes below Android.
